

KYC-me&Alicloud_Authentication_Guide

Documentation version: v1.0.2

Update date: 2023.07.19

The Trinity-Tech team has completed the integrated development with Alicloud eKYC, and now the real-name authentication can be completed through the **passport**. The user experience will continue to be optimized in the future.

1. Device

mobile phone

2. Essentials version

The released version of Essentials V3.0.9 is available.

[Download the link for Essentials 3.0.9](#)

Android version :

<https://download.trinity-tech.io/app/elastos-essentials/Essentials.apk>

IOS version :

<https://elink.elastos.net/download>

3. Steps

Note:

The Android version is built-in to support third-party applications. The iOS version does not support built-in due to the review policy.

At the same time, the iOS version supports opening third-party applications on external browsers by default.

So if iOS users want to experience a similar effect on Android, iOS users need to do the following:

1. Open the Essentials app.
2. On the Essentials homepage, click the settings icon in the upper right corner to enter the settings page, then click the privacy menu to enter the privacy settings page, and open the button in the column behind the built-in browser.
3. Open the "Discover dApps" menu.

4. Enter "kyc-me.io" in the address bar to open the KYC dapp.

The following uses the Android device to operate

Login with Elastos DID within KYC-me

1. Enter the Essentials wallet homepage, find the menu "Discover dApps", and click to enter.
2. Find the dApp -- "Kyc-me", and click to enter the "Kyc-me" application.

3. Click the "Sign in" button in the upper right corner.
4. After the page jumps, click the "Sign in with Elastos DID" button.
5. Jump to Essentials, the pop-up request DID authorization login page and click the "Accept" button.

6. Jump to the KYC-me again, and click the "My Dashboard >" button.
7. After the page jumps, click the "Verify now >" button.
8. After the page jumps, click the "Verify" button.

Do KYC certification in Alicloud

1. The page jumps to the alicloud in-app authentication, and after viewing the prompt information, click the "Start certification" button.

2. Follow the tips to do KYC authentication.

- o The first step is to use the passport for authentication.
- o The second step is to do face recognition.

3. After the authentication is successful, jump to the KYC-me application;

Import KYC credentials into identity

1. Click the "Back to dashboard" button to enter the certificate list page.
There are currently 6 credentials: Full name, Gender, Nationality, Date of birth, Passport number, and Passport number hash.
2. If you want to import a certain credential separately, please click the button "Import to Identity wallet" under this credential.
If you want to import all credentials at once, please click the button "Import all credentials to Identity wallet".
3. On the pop-up page of requesting to import credentials on Essentials, click "Accept" to complete the import of credentials.

4. FAQ

1. Why is the DID login unsuccessful, prompting me to publish my identity?

DID can be successfully signed in on KYC-me after it is published on the chain.

Under normal circumstances, DID will be automatically published on the chain after it is created.

If DID is not published successfully due to network or service, please manually publish it on the chain.

If the DID has been published successfully, but when you try to sign in, it still prompts that you need to publish it on the chain. It may be due to the network, just wait for a few minutes and try again.

Note:

The steps to manually publish DID are as follows:

2. Why the "Verify" button is grayed out and cannot be clicked on the page opened by kyc-me.io?

Desktop browser is not supported, please switch to the mobile phone to experience.

3. Why does the ID photo taken in the local gallery always prompt that the authentication failed?

Please ensure that the ID photo is taken on a horizontal screen.

Currently, compatibility with vertical screens is low.

The recognition rate is higher when the ID photo is directly taken during authentication.

Please follow the rules for taking ID photos before starting the authentication.

4. Some Android devices open the KYC-me app in the Essentials internal browser, the camera is stuck?

The built-in browser compatibility of some Android models is not very good, please switch to the external browser to use.

Mainstream browsers such as Chrome/safari are recommended.

Switch to open the dapp method:

5. Samsung mobile phone, the camera cannot be turned on when doing kyc authentication on the Samsung browser?

There may be a problem with the permissions that allow the browser to use the camera.

Please do the related operations:

- Settings->Apps->Samsung Internet->Permissions->Camera, select "Allow only while using the app" (if there is no problem with the settings, please continue to the next step)
- Clear history on the Samsung browser.
- Kill the Samsung browser process and try it again.

6. Can't find Essentials in the Apple store for iOS devices?

An overseas ID is required to download Essentials.
