

# KYC-me & Alicloud Authentication Guide

Documentation version: v1.0.1

Update date: 2023.07.06

The Trinity-Tech team has completed the integrated development with Alicloud eKYC, and now the real-name authentication can be completed through the **passport**. ID card authentication is expected to also be available after July, and the user experience will continue to be optimized in the future.

## 1. Device

mobile

## 2. Essentials version

The released version of Essentials V3.0.9 is available.

### Download the link for Essentials 3.0.9

**Android version :**

<https://download.trinity-tech.io/app/elastos-essentials/Essentials.apk>

**IOS version :**

<https://elink.elastos.net/download>

## 3. Steps

**Note:**

The Android version is built-in to support third-party applications. The iOS version does not support built-in due to the review policy.

At the same time, the iOS version supports opening third-party applications on external browsers by default.

So if iOS users want to experience a similar effect on Android, iOS users need to do the following:

1. Open the Essentials app.
2. On the Essentials homepage, click the settings icon in the upper right corner to enter the settings page, then click the privacy menu to enter the privacy settings page, and open the button in the column behind the built-in browser.
3. Open the "Discover dApps" menu.

4. Enter "kyc-me.io" in the address bar to open the KYC dapp.

The following uses the Android device to operate

### Login with Elastos DID within KYC-me

1. Enter the Essentials wallet homepage, find the menu "Explore dApps", and click to enter.
2. Find the dApp -- "KYC-me", and click to enter the "KYC-me" application.

3. Click the "Sign in" button in the upper right corner.
4. After the page jumps, click the "Sign in with Elastos DID" button.
5. Jump to Essentials, the pop-up request DID authorization login page and click the "Accept" button.

6. Jump to the KYC-me again, and click the "My Dashboard >" button.
7. After the page jumps, click the "Verify now >" button.
8. After the page jumps, click the "Verify" button.

## Do KYC certification in Alicloud

1. The page jumps to the alicloud in-app authentication, and after viewing the prompt information, click the "Start Authentication" button.

2. Follow the prompts to do KYC authentication;

The first step is to use the passport for authentication (the authentication of the ID card will be launched later);

The second step is to do face recognition;

3. After the authentication is successful, jump to the KYC-me application;

### Import KYC credentials into identity

1. Click the "Back to dashboard" button to enter the certificate list page.  
There are currently 6 credentials: Full name, Gender, Nationality, Date of birth, Passport number, and Passport number hash.
2. If you want to import a certain credential separately, please click the button "Import to Identity wallet" under this credential.

If you want to import all credentials at once, please click the button "Import all credentials to Identity wallet".

3. On the pop-up page of requesting to import credentials on Essentials, click "Accept" to complete the import of credentials.

View imported credentials in Essentials
